

CHAPTER 3

Eating

FOR A HEALTHY HEART

HEALTHY EATING

CHAD SHARES HIS STORY

When asked about his new reality after surviving a heart attack, Chad says, “I’ve learnt how to manage my new life and I’ve rolled with it. I had to.” Chad had been relatively active all his life but felt he needed help to improve his diet. “I’ve changed my lifestyle,” he says. Thanks to all the help from the dietitian, “Grocery shopping now takes me two hours,” Chad jokes. He now understands the importance of reading labels and choosing foods with less saturated fat, added sugar and sodium. He says, “My blood pressure and cholesterol levels are spot on for the first time in years.”

WHAT IS HEART-HEALTHY EATING?

The foods you eat affect your health. A healthy diet can help reduce your risk of heart disease by:

- Improving your cholesterol levels
- Reducing your blood pressure
- Managing your body weight
- Controlling your blood sugar

Food plays many roles in our lives and we eat for lots of reasons other than hunger. Listen to your body for the signs of hunger.

This is what a heart-healthy diet looks like. It is an overall balance of whole, natural foods. It has few highly processed, unhealthy foods.

- **Vegetables and fruits** are a good source of antioxidants, vitamins, minerals and fibre. Try to have 7 to 10 servings of vegetables and fruit each day.
- **Grain products** have lots of fibre, B-vitamins and minerals.
- **Meat and alternatives** are a good source of protein. Protein is found in:
 - Beans and lentils
 - Unsalted nuts and seeds
 - Lean meats (e.g. lamb, beef, pork), poultry and fish
- **Milk and alternatives** are a rich source of protein, vitamins and minerals. Choose lower-fat dairy options more often.

WHAT CHANGES CAN YOU MAKE TO START A HEART-HEALTHY DIET?

Prepare meals at home using fresh, whole foods.

- Combine vegetables and fruits for a great appetizer or salad.
- Choose whole grains like whole wheat, oatmeal, oat bran, bulgur, quinoa, brown or wild rice and hulled barley for at least half of your grain servings each day.

- Add legumes such as lentils, kidney beans, and chickpeas to soups, salads and main dishes.
- Eat fish at least twice a week. Choose fatty fish like salmon, mackerel and herring.
- Add milk or fortified soy beverages to your oatmeal, smoothies, hot beverages, etc.

Fill half your plate with vegetables and fruits.

- Choose a range of brightly coloured vegetables and fruits every day. Eat them raw, roasted, steamed or stir fried.
- Choose orange and dark green vegetables more often: carrots, butternut squash, sweet potatoes, romaine lettuce, broccoli and kale.
- Try unsweetened frozen or canned fruit in the winter.
- Choose whole fruit over juice, even if the juice is unsweetened.
- Use the Eat Well Plate method to plan out meals.

Drink water or lower-fat plain milk or milk alternatives if you are thirsty.

- Choose skim, 1% or 2% plain milk and yogurt.
- Avoid pop, sports drinks, ready-to-drink tea and coffee drinks, fruit drinks and juices.

Use less sugar, salt and fat when preparing or cooking meals.

- Rinse canned vegetables and fruit that could have added sugar or salt.
- Replace salt with herbs and spices, ginger, garlic, onion, lemon juice or pepper to flavour foods.
- Use smaller amounts of condiments like ketchup, prepared mustard, light soy sauce, salted herbs and poultry or steak spices.

Choose foods higher in fibre.

- Eat more vegetables.
- Eat fruits with their peels if possible.
- Add a vegetable and/or fruit to every meal and snack.
- Choose whole grain bread, flour, pasta or rice instead of white.
- Add one to two tablespoons of bran, high-fibre cereal, psyllium, bran buds, chia or ground flaxseed to your favourite cereal.
- Add fibre to your diet slowly to prevent gas, bloating or diarrhea.

If you do eat out, choose restaurants that serve freshly prepared foods.

- Look for menu items that say steamed, broiled, boiled, grilled, baked, roasted or poached.
- Avoid items that say fried, deep-fried, battered, breaded, pickled or smoked.
- Replace fries with a salad, vegetables or rice for a healthier side dish.
- Ask for gravies, dips and sauces on the side so you can control how much to add.
- Avoid menu items with a cream, cheese or butter sauce.
- Skip the bread and butter.
- Choose fresh fruit, yogurt or sherbet for dessert.
- Ask for a doggie bag to take leftovers home if you can't finish your meal.

Eat fewer processed foods.

Highly processed foods are changed from their original food source and have many added ingredients. Different flavours, preservatives and other chemical ingredients are added in a factory. Processed foods also include refined foods which have had important nutrients such as vitamins, minerals and fibre taken out. Processed foods are often convenient, packaged foods that are easy to grab or are ready-made. But beware — they are often high in calories (energy), sugar, salt and trans fat!

- Hot dogs, deli meats and fast food burgers
- Chips, crackers
- Cakes, donuts, cookies
- Candies and chocolate bars
- Pop, sports drinks and ready-to-drink tea and coffee drinks
- Ice cream and ice cream bars
- Frozen pizzas, rice or pasta entrees
- Refined foods such as white rice, bread and pasta

UNDERSTANDING FAT, SODIUM, ADDED SUGAR AND ALCOHOL

OILS AND FATS

A small amount of fat is necessary for health. Fat can help your body absorb vitamins but it is also high in calories. The best way to avoid eating too much fat is to eat a diet full of natural, whole foods and to limit processed foods.

The type of fat and where it is found is just as important as the amount you eat. There are three main types of dietary fats:

- **Unsaturated fats** come from plant sources and from fish, and are good for your heart and blood vessels. Unsaturated fats are liquid at room temperature.
- **Saturated fats** are commonly found in processed and fried foods. They can also occur naturally in animal products and some plant-based and vegetable oils. Saturated fat raises bad (LDL) cholesterol which is a risk factor for heart disease.
- **Trans fats** are created when hydrogen is added to liquid oils. They are solid at room temperature. Trans fats are used in processed foods to increase their shelf life, but they increase the risk of heart disease, diabetes and other health problems. On food labels, they may be called “hydrogenated oils.”

Plant sterols

Plant sterols are a type of vegetable fat. They lower bad (LDL) cholesterol and reduce your risk of heart disease. Plant sterols are found in:

- Vegetable oils: Corn, sesame, safflower, wheat germ
- Nuts and seeds: Pistachios, pine nuts, sesame and sunflower seeds
- Vegetables and fruit: Carrots and oranges.

Plant sterols are added to some foods, like non-hydrogenated margarine. Talk to your dietitian or doctor about adding sterols to your diet, especially if you take medication to lower your cholesterol.

Healthy Eating Tip	Type of Fat	Source
Choose more often	Omega 3-polyunsaturated	Cold-water fish: Salmon, trout, mackerel, sardines, herring Oils: Canola, soy Nuts and seeds: Walnuts, flaxseed (ground), chia seeds Omega-3 eggs Legumes: Soybeans and products, such as tofu
Eat in moderation	Monounsaturated	Oils: Olive, canola, peanut Non-hydrogenated margarine from these oils Salad dressings from these oils Nuts and nut butters: Almonds, pecans, hazelnuts, peanuts Avocados
	Omega 6-polyunsaturated	Oils: Safflower, sunflower, corn Non-hydrogenated margarine from these oils Salad dressings from these oils Nuts, nut butters and seeds: Pine nuts, sunflower seeds
Choose less often	Saturated	Processed meats: Sausages, bologna, salami, hot dogs, liver or meat paté High-fat meats: Lard, regular or medium ground beef, prime rib, lamb, poultry with skin, duck fat, visible fat from meat Full-fat dairy products: Whole milk, high-fat cheese, cream, butter Oils: Coconut, palm, palm kernel oil
Avoid	Trans	Shortening Hard, hydrogenated margarine Commercial baked goods: Donuts, cookies, crackers, croissants, pastries, pies, commercial muffins Products containing partially hydrogenated oils: Fast food, deep fried food

ADDED SUGAR

Sugar provides the body with energy. Milk, fruit, vegetables, starches and grains all contain sugar. When you see “added sugar” on a food label, it means sugars have been added to the food or drink when it is being produced or prepared. Sugar in honey, syrups and fruit juices are also added sugar.

Added sugar gives you energy for a short time, but doesn’t help you in any other way. A high-sugar diet is linked to heart disease, stroke, obesity, diabetes, high cholesterol, cancer and cavities in your teeth.

© Heart and Stroke Foundation of Canada

Limit the amount of sugar in your diet:

- Eat whole, natural foods.
- Read food labels to identify and avoid foods with added sugars.
- Drink water instead of sweetened beverages such as pop, chocolate milk, sports drinks, juice, ready-to-drink coffees and teas.

Understand what the sugar claims on packaged foods mean:

- **No added sugar:** The food item doesn't have added sugars such as glucose, fructose, honey or molasses. However, it may contain naturally occurring sugars from fruit and dairy products.
- **Reduced or lower in sugar:** The food item contains at least 25% and 5 grams less sugar than the food to which it is compared.
- **Unsweetened:** The food item contains no added sugars and it doesn't contain artificial sweeteners like aspartame or sucralose.
- **Sugar-free or sugarless:** Each standard serving contains less than 0.5 grams of sugar and less than 5 calories per serving.

ADDED SODIUM

Your body needs sodium to maintain the balance of water in your body. Salt is the main source of sodium. Other salts, such as sea salt and gourmet salts, all have similar sodium content. Salt is found naturally in shellfish, dairy products, meat and vegetables. In this book, we will use the term “salt” instead of “sodium”.

Normally, your kidneys get rid of extra salt in your urine. This keeps your water balance normal. If you regularly have a lot of salt, it can make your body hold

extra water. Too much water increases the total amount of blood in your body, which increases blood pressure. A high-salt diet may cause or worsen high blood pressure. Most of the salt found in the typical Canadian diet comes from processed food, NOT the salt shaker.

*“I loved salt, and all that, and I didn't think I would ever be able to change, but I did.”
~Meldon*

Reducing salt in your diet will decrease your risk of high blood pressure. It may take some time, but your taste buds will adjust and you will want less salty food. If you reduce your salt intake to 2,300 mg of sodium per day (one teaspoon of salt), you reduce your risk of heart disease.

© All rights reserved. Sodium Detector. Healthy Canadians, 2012. Reproduced with permission from the Minister of Health, 2016.

People with high blood pressure or heart failure should limit salted foods. If you have any concerns about salt in your diet, talk to your dietitian, doctor or nurse practitioner.

Get more tips to reduce your salt intake at dietitians.ca and eatrightontario.ca

RED WINE AND ALCOHOL

Antioxidants in red wine increase good (HDL) cholesterol and may help prevent heart disease. Moderate intake of alcohol may also help reduce formation of blood clots (atherosclerosis). A moderate amount of alcohol means:

- Women
 - No more than two drinks a day most days, to a weekly maximum of 10
 - At least one or two days each week with no alcohol
- Men
 - No more than three drinks a day most days, to a weekly maximum of 15
 - At least one or two days each week with no alcohol

Source: Image reproduced with permission from the Canadian Centre on Substance Abuse 2015

Be careful with alcohol. A high alcohol intake can increase your blood pressure, your body weight and your triglyceride levels. If you drink little or no alcohol, keep it up!

Your doctor may advise you not to drink alcohol if you:

- Take certain medications
- Have diabetes that is poorly controlled
- Want to lose or maintain a healthy weight
- Have high blood pressure
- Have high triglycerides

Learn about drinking recommendations from Canada's Low-Risk Alcohol Drinking Guidelines at ccsa.ca

ADOPTING A HEART-HEALTHY EATING PATTERN

What you eat is important to your health. But how you eat may also be important to your family and social life. Well prepared and colourful food can be a feast for the eyes and your taste buds. Here are some tips to help you with heart-healthy eating.

EAT AT THE TABLE

- Eat with family members or friends. Make the meal a chance to connect.
- If you are eating alone, think about or plan your day.
- Enjoy your food.
 - Turn off the television and the computer.
 - Pay attention to the look, smell and taste of your meal.
- Eat slowly and put your fork down between bites.
- Be aware of how much you eat.

EAT OFTEN ENOUGH

- Eat a meal or snack within an hour or two of waking up.
- Eat at least three times each day. Try to eat every five hours or sooner if possible.
- Do not skip meals: You may be too hungry by your next meal and eat too much.
- Plan healthy snacks if you get very hungry between meals. You might make unhealthy food choices or eat too quickly when you are very hungry. A healthy snack contains items from at least two food groups with 1-2 servings of vegetables and/or fruit with each snack.

PREPARE FOOD AT HOME

- Meals don't have to be fancy; they can be as simple as a peanut butter and banana sandwich on whole grain bread with a glass of milk.
- Cook a little extra so you have food ready for the next day. You can also make more and freeze future meals.
- Cut your vegetables before you put them in the fridge. Also, marinate meats before you freeze them. These tricks save time when you are ready to make a meal.

SHOP FOR HEART-HEALTHY EATING

- Shop in stores and markets with a good choice of fresh foods.
- Read the Nutrition Facts table on food packages.
- Make a meal plan with a shopping list to avoid impulse buys.
- Shop when you are not hungry.
- Buy mostly vegetables, fruits and whole grains.
- Buy lower-fat dairy and lower-fat cheese (<20% M.F.).
- Buy lean meat and alternatives, such as beans and fish.
- Buy time-saving products, such as bagged and washed salad, ready-to-eat dips, such as hummus or tzatziki, and bagged baby carrots.

OTHER HEART-HEALTHY DIETS AND MENUS

There are many heart-healthy ways of eating. The DASH diet and the Mediterranean diet have been proven to reduce the risk of heart disease. The DASH (Dietary Approaches to Stop Hypertension) diet is high in vegetables and fruits, and is high in dairy servings. The Mediterranean diet is high in fruits, vegetables and whole grains, and it is low in dairy, red meat, processed food and sweets. These diets are good tools to help you understand healthy serving sizes and plan your heart-healthy menu.

Learn more about:

- The DASH diet at heartandstroke.ca/dash
- The Mediterranean diet at icm-mhi.org/en

FIND AN EATING PLAN THAT WORKS FOR YOU

Finding an eating plan that works for you doesn't have to be complicated. You can simply decide to eat fresh unprocessed foods and cook at home more often. Or you can use the DASH diet or Mediterranean diet to design your menu.

Your eating plan is something that should work for the rest of your life. Diets that limit your food choices do not work long-term. You may not get needed nutrients and could gain weight back that you lost.

Whatever eating plan you pick, the bottom line is to choose a wide range of healthy foods. Eat more vegetables and fruits, whole grains, lower-fat dairy products and alternatives, lean meats, fish, legumes, and nuts. Explore new recipes and foods from

other cultures. Use this meal planning chart to get you started on planning healthy

eating. Talk to a dietitian if you have any questions about your diet.

Discover new recipes at heartandstroke.ca/recipes

Meal	Sample menu	My choices
Breakfast	<ul style="list-style-type: none"> 3/4 cup oatmeal 1 cup skim milk 1 cup berries 2 tbsp ground flaxseed 	
Snack	<ul style="list-style-type: none"> 1 home-baked bran muffin 1 orange 	
Lunch	<ul style="list-style-type: none"> 1 cup homemade vegetable soup Salmon sandwich: <ul style="list-style-type: none"> 1/2 can (75g) salmon 2 slices whole grain bread 1 tsp mayonnaise lettuce 1 tomato 1 apple 	
Snack	<ul style="list-style-type: none"> 1 cup raw vegetables 1/2 cup hummus 	
Dinner	<ul style="list-style-type: none"> 1 slice (75g) turkey meat loaf 1/2 cup roasted Brussels sprouts 1/2 cup roasted beets 1 cup brown rice 3/4 cup of plain yogurt with added vanilla extract 1/2 cup berries 	

Go to page 18 for help to develop healthy eating habits that stick.

Find a dietitian by contacting your provincial dietitians' association

FOOD LABELS

Food labels have important information to help you make healthy choices. The most important information is in the Nutrition Facts table and the ingredient list.

THINGS TO LOOK FOR ON THE NUTRITION FACTS TABLE:

Serving size (at top of table)

Is this the amount you are eating? If not, you need to adjust calories (at the top) and nutrients (listed below) based on how much you eat.

Calories

This describes how much energy you get from the food. This is very important if you are watching your weight.

Fat content

Look at the amount of fat — this gives total fat content including unsaturated, saturated and trans. Aim for zero trans fat as it is unhealthy and should be avoided.

Sodium

Look at the “mg” of sodium and remember the maximum recommended is 2,300 mg per day (less if you are on a low-salt diet). Avoid high-salt foods (more than 15% daily value).

Fibre

Look under carbohydrates. Choose foods with at least 2 grams of fibre per serving.

Vitamin A, vitamin C, calcium and iron

Choose foods that provide these vitamins and minerals.

Nutrition Facts	
Per 1 cup (250 ml)	
Amount	% Daily Value
Calories 110	
Fat 0 g	0 %
Saturated 0 g	0 %
+ Trans 0 g	
Cholesterol 10 mg	
Sodium 25 mg	1 %
Carbohydrate 27 mg	9 %
Fibre 0 g	
Sugars 26 g	
Protein 10 mg	
Vitamin A 0 %	Vitamin C 100 %
Calcium 0 %	Iron 0 %

The Nutrition Facts table gives you information on the amount of 13 core nutrients and calories in a serving. Use this information and the % Daily Value (% DV) to choose and compare food products for a healthier you.

©All rights reserved. The Nutrition Facts Table. Health Canada, 2008. Reproduced with permission from the Minister of Health, 2016.

% DAILY VALUE (DV)

The “% daily value” tells you if the food has a little (5% or less) or a lot (15% or more) of a certain nutrient: This applies to all nutrients.

INGREDIENTS

Each food label has an ingredient list. It lists the order of ingredients from largest to smallest quantity. Here are some tips for understanding the ingredient list:

Unsaturated fats: oils (soybean, corn, safflower, canola, olive, sesame, flaxseed), nuts (peanuts, cashews, almonds, pecans, walnuts) and non-hydrogenated margarine.

Saturated fats: fat, lard, butter, oils (palm, coconut, palm kernel), monoglycerides, diglycerides or tallow.

Trans fats: hydrogenated or partially hydrogenated vegetable oil, hard margarine or shortening.

Added sugar: sugar, honey, molasses, anything that ends in “ose” (dextrose, sucrose, fructose, maltose, lactose) or syrups.

Added salt: sodium, sodium chloride, sodium bicarbonate or baking soda, baking powder, monosodium glutamate (MSG), sodium/disodium/monosodium phosphate, brine, sea salt, soy sauce or spices.

Learn about the Nutrition Facts table at [hc-sc.gc.ca](https://www.hc-sc.gc.ca)

MY HEALTHY EATING

HOW I EAT NOW

Do I ... (check off all that apply)

- Eat foods that are high in salt or add salt to my food?
- Eat highly processed snack foods such as donuts, cookies, chips and crackers?
- Eat highly processed meats such as hot dogs, burgers, sausages and deli meats?
- Eat fried foods such as French fries, onion rings and chicken nuggets?
- Eat frozen dinners such as pizza and meat pies?
- Drink sugary drinks such as pop, fruit drinks, 100% fruit juices, sports drinks or specialty coffees and/or teas?
- Skip meals?
- Eat while watching TV?
- Eat when I do not feel hungry?

WHAT CHANGES CAN I MAKE TO EAT HEALTHIER?

AM I EATING FOODS FROM ALL FOUR FOOD GROUPS?

Group	What I eat now	How I can improve
Vegetables and fruits (aim for 7-10 servings/day)		
Grain products (look for whole grains, unprocessed)		
Milk and alternatives (choose lower-fat)		
Meat and alternatives (include a variety: beans and lentils, nuts and seeds, lean meats, poultry and fish)

HOW TO MAKE HEALTHY LIFESTYLE CHANGES

Ask yourself: “Is there anything I would like to do for my health? Is there anything I can do to improve my quality of life with heart disease?”

The key to making lifestyle changes is developing healthy habits that stick. The change will become a habit that you do every day without thinking, like brushing your teeth. Here are seven tips to help you plan for change:

“I have learnt how to manage my new life and I have rolled with it. I had to change my lifestyle.” ~ Chad

1. SET A SMARTER GOAL

Your healthcare team can help you decide which lifestyle change would have the greatest impact on your overall health and heart disease. Make sure it is a change that you feel confident about.

When you have your goal, make it into a SMARTER goal:

- **S**pecific: Vague goals produce vague results. Know what the goal is, and the when, where and how of the goal.
- **M**easurable: Putting a number in your goal makes it easier to measure your progress towards the goal.
- **A**ttainable: You have to be able to achieve the goal. An extremely difficult goal will set you up for failure.
- **R**ealistic: Is this something that you are willing and able to work towards?
- **T**imely: Set a time to achieve your goal.

Try to choose one goal that you can achieve in a short period. For example, “I will walk around the block once a day for a week.” Make the goal specific and realistic. Set yourself up to succeed!

2. FIGURE OUT HOW YOU WILL ACHIEVE YOUR GOAL

Planning is one of the most important steps to success. Ask yourself, “What do I need to do to reach my goal?”

Then make a plan that sets out specific steps to success. For example, if your goal is to eat seven servings of vegetables and fruit every day, you could break it down this way:

How many servings of vegetables and fruit do I eat now?

- I eat four per day. I will need to add three to reach my goal.

Ideas to add servings each day

- Eat salad of colourful vegetables for lunch.
- Make vegetable soup for lunches.
- Have a piece of fruit for an afternoon snack.
- Choose a vegetable stir-fry when out for dinner.

What I can do to make it happen

- Plan my meals for the week.
- Shop with a list that includes extra fruit and vegetables.
- Wash and cut up fruit and vegetables ahead of time.
- Keep track of the fruit and vegetables I eat each day.

3. PREPARE FOR OBSTACLES

Try to think ahead about the challenges you might face. Develop a plan to meet them. For instance, you may have to miss a morning walk if you have a doctor's appointment. Plan to walk after lunch or dinner.

4. GET SUPPORT

Cardiac rehabilitation programs are run by people who are experts in helping you make lifestyle changes and get comfortable with life with heart disease. Programs are offered in person, over the phone and online.

Check with the Canadian Association of Cardiovascular Prevention and Rehabilitation at cacpr.ca to find a program near you. If you cannot find a centre near you, talk to your doctor.

You can also find support closer to home from your family and friends. If you have a partner, ask them to make the change with you. Here are some more tips on reaching out for support:

- Ask a family member, friend or neighbour to go for a walk with you.
- Ask for help to cut up vegetables and fruit.
- If you don't buy the groceries, ask whoever does to only buy healthy snacks.
- Ask the people in your house not to smoke at home or in your presence.
- Ask your healthcare team for information and coaching. For instance, your physiotherapist can give you a safe exercise routine. Your dietitian can help with healthier food choices.

5. TRACK YOUR PROGRESS

The more you track your progress, the greater your chances of achieving your goal. For example, if your goal is go outside for a walk after dinner four times a week, this simple log will track the time you spend walking for each day of the week.

You only need to track the changes until you feel that they have become a regular habit.

Date	Time spent walking
Sun	
Mon	
Tues	
Wed	
Thurs	
Fri	
Sat	

6. WHEN THINGS GO OFF PLAN, KEEP GOING

It can be hard to stick to a plan if you are tired, stressed, or not feeling well. Setbacks are a normal part of the process — they are not a failure. Don't give up. Here are some tips to help you turn a setback around:

- Remind yourself why you want to make the change. Think about how important it is.
- Look at what you've achieved so far. It is human nature to focus on the things we don't get right, but try instead to give yourself credit for what you have accomplished.
- Start keeping a log again.
- Look at what caused the setback. What can you do if it happens again?
- Look for support. Ask your family to help you get back on track.
- Check your goals again. Are they specific, realistic and measurable? Do you need to change them?
- Do you need to change your plan?

7. CELEBRATE SUCCESS!

Whenever you make a small step toward your goal, pat yourself on the back and congratulate yourself. Reward yourself with something you like — like reading your book after your walk. And, remember, focus on the small steps you have achieved. If your goal was to walk every day one week, and you only did it 5 times, don't focus on not quite making it to your goal. Focus on the fact that you accomplished walking 5 days in row!
