

## **Autonomy, Competence, and Relatedness as Predictors of Motivation after Stroke**

**Location:** Canada

**Number of participants:** 30

**Recruitment period:** Until end of March 2024

**Description:** Researchers at the University of British Columbia are looking to evaluate what factors of motivation impact community involvement in the stroke population. Data will be collected through a series of questionnaires conducted via Zoom. The findings of the study will help healthcare professionals provide more effective stroke treatment programs by identifying, better understanding, and addressing motivation as a possible barrier to community involvement and thus improve treatment outcomes.

**Language:** English only

### **Eligibility:**

- Experienced a hemorrhagic or ischemic stroke
- Be at least 6 months post stroke
- Be medically stable and live outside of a hospital setting
- Over the age of 19

**Participant requirements:** Date and times of opportunities will be decided based on the schedules of the participant and researcher. The session will be conducted via Zoom and take approximately 72 minutes. A \$15 gift card will be provided to participants to compensate them for their time.

**Institution:** University of British Columbia

**Contact:** Interested participants that meet the eligibility criteria can submit their interest via email to [candace8@student.ubc.ca](mailto:candace8@student.ubc.ca).
